Abstract:

This is a platform providing an online marketplace that connects chefs who want to sell meals to users looking for fresh, home-cooked meals. With people wary of ordering from or dining in at restaurants, food made by home has been more in demand. This platform is meant to help those running their home food business and those who crave home-cooked meals.

Advantages:

- For people with no domestic help or cooks, it becomes tedious to manage chores and meal preparation. Ordering from a home chef gives them just the respite they need.
- Home chefs also take more care about safety and healthy options than a kitchen that produces mass quantities of food.
- Simpler dishes and customisable portions
- Food that caters to various health restrictions
